

Vein Specialty Center uses advanced techniques

WOOSTER — Dr. Larry Stern is a general and vascular surgeon who has practiced in Wayne County since 1995. He is board certified by the American Board of Surgery, and has been fellowship trained in vascular surgery.

In 2002, Stern established Surgical Specialists of Wayne County, LLC, which has provided a broad range of surgical services since its inception. With a special focus on varicose veins and venous diseases, the practice has attracted a large number of patients from Wayne and surrounding counties.

In 2005, the Vein Specialty Center was established to offer the most modern, state-of-the-art treatments for vein problems.

The Vein Specialty Center is the only specialized center of its kind in Wayne County. It serves patients from Wayne and five nearby counties.

A Web site has been developed in the past year which serves as an introduction to the medical practice and as a convenience to current and prospective patients. New patients can download and print registration forms from their home computer, which greatly reduces waiting time during office appointments. In addition, there is information about the staff, available procedures, a photo gallery and patient testimonials.

The Vein Specialty Center is committed to providing the most up-to-date treatments for its patients. The most modern procedures incorporating the latest in technology are offered at the Vein Specialty Center. A wide variety of diagnostic and therapeutic options are available, resulting in a comprehensive approach to the management of varicose veins and venous diseases. All procedures are minimally invasive and are performed on an outpatient basis, usually with little or no discomfort.

With the rapid growth of the practice, the Vein Specialty Center relocated to 2317 Gateway Drive, Suite C, in January 2009. The expanded facility is now much larger and more comfortable than its previous quarters.

Advanced ultrasound imaging equipment allows for the non-invasive diagnosis of vein problems. A new, modern procedure room allows for the performance of vein procedures in a safe and relaxed setting. Additional medical personnel, with experience in vein and cosmetic procedures, have been recruited to the staff to accommodate the growth in services.

“Our mission is to provide advanced techniques for the diagnosis and treatment of varicose veins and venous diseases. Our goal is to achieve symptomatic, functional and cosmetic improvement for our patients.”
